

CENTRIFUGAL AIR MOVER

13Kg, 50cm x 44cm x 50cm

This Centrifugal unit is a powerful air mover that works especially well in a number of specific applications, such as drying underneath carpet, inside cabinetry through access holes, and within walls or other cavities and void spaces.

TYPICAL USES:

- Carpet Drying- Due to its high static pressure output, these air movers are great for getting air underneath carpets. This technique is commonly referred to as “floating” carpet. It can be a great way to dry out carpets, underlayment and the subfloor at the same time.
- Cabinetry Drying- Great for introducing air movement to wet cabinetry void spaces, due to its high static pressure output.
- Wall, Ceiling and Basement Cavity Drying- Great for drying out void spaces where high static pressure is required to maintain airflow across the surfaces. This unit can be ducted or vented in different ways to introduce airflow into smaller spaces.
- Structural Drying- Great jack-of-all-trades air mover, used in the industry to dry building materials in multiple water damage situations.

Specifications

Fan Speed Setting	3
Power Supply (V / hz)	230
Stackable	Yes
Air Flow (m3/hr)	4600
